Northern European Journal of Language Technology: Template

Anonymous authors

Abstract Here are the guidelines for typesetting a manuscript for the Northern European Journal of Language technologies. The guidelines follow themselves and so are an example of the results. These cover manuscripts both submitted for review and for camera ready. Please follow all the instructions here. If you use a template, this will do much of this for you.

1 Introduction

Documents not in this template risk rejection without review. Do not adjust the font sizes. Submissions must be one PDF file, formatted as A4.

2 Length

For a full paper, any length is fine, though 7-11 pages is recommended. Longer papers are held to a higher standard. Shorter papers are welcome for highly-impactful results.

Letters should be up to around 1000 words, and may include 2-3 floats (i.e. tables or figures). This will be around two pages in this template, including front matter and bibliography. These are reviewed more quickly than full papers and designed to relay a sharp and timely result, or a comment on the field.

Appendices and bibliography do not count towards the page limit. Appendices must follow after the bibliography with each appendix starting on a new page.

3 Section Headings

Use Arabic-numbered section headings. The (optional) acknowledgements and (required) references sections must appear in that order, and not be numbered. Section titles should be in title case.

4 Footnotes

In general, try to avoid footnotes, instead including the content inline. If one must be included, the number must be placed *after* adjacent baseline-connecting punctuation such as commas, full stops and semi-colons.[1]

5 Figures and Tables

Place these items close to where they are first mentioned, and not all at the end of the document.

Provide a caption with every table and illustration. The caption should be below the item. Authors should use palettes that work for a wide variety of colour perceptions, and employ saturation and lightness as well as hue to convey information. Vector illustrations must be used unless the source information is bitmap-based (e.g. photographs). If tables use lines, these should be well-connected without spurious gaps between rows.

6 References

Use author-date citations, not numbers. Include all authors in the bibliographic entry. Use \newcite for inline references. Attribute agency to authors and not manuscripts, e.g. "Inie and Dalsgaard (2020) find that [...]"

One may cite one's own work, but in the third person, in order to preserve anonymity.

Place all references together under a References heading. List them in order of first author surname, subsorting by year (ascending). Only include references that are cited within the text. Ensure that every reference mentioned in the text is expanded in the reference section.

Titles should have correct capitalisation; forcing sentence case is not always appropriate. For example, use "BERT" instead of "Bert" or "bert".

---

[1]This is where a footnote marker should be placed, but try to avoid footnotes overall.

58 Do not use an arXiv reference where the paper has
59 also appeared in a peer-reviewed venue. In that case,
60 use the peer-reviewed reference.
61 For book chapters, use inbook, e.g. Swift (1704).

7 Non-English worked examples

63 The lagnuage of the journal is English. American
64 English and English English are both fine, as are
65 other spelling and formulation variants. When
66 discussing non-English languages, please provide
67 translations into English. When providing and
68 discussing important worked examples, please
69 include interlinear glosses. The Leipzig style is pre-
70 ferred, https://www.eva.mpg.de/lingua/pdf/Glossing-
71 Rules.pdf. There are LaTeX packages that support
72 this.

8 Non-English character rendering

75 To render non-English characters, use your favourite
76 method that retains the journal layout and font. Past
77 authors have had success with using XeTeX and the
78 libertine package, and defining a block like:

```
79 \usepackage{libertine}
80 \newfontfamily\hebfont{Frank Ruehl CLM}
81 \newcommand{\heb}[1]{{\hebfont #1}}
82 \setmainfont{Linux Biolinum O}
```

83 where \heb can then be used to wrap text and apply
84 the specified font.
